

Fibox offers a full range of enclosure customization services based upon years of experience helping our customers. Our expertise will provide cost effective solutions for your most complex packaging requirements.

All Fibox enclosures can be customized to meet your requirements. Sophisticated CNC machinery can fabricate enclosures with holes, cutouts, recesses, and more. Enclosures can be painted, nomenclature can be silk-screened, and accessories can be installed...resulting in delivery of a completed mechanical assembly.

At our Baltimore service center, Fibox maintains a customization facility, staffed with application engineers, CAD and CAM programmers, and equipped with modern CNC machinery specifically designed and built for precision machining. Many packaging solutions utilize Fibox accessories to improve the functionality of the enclosure system.

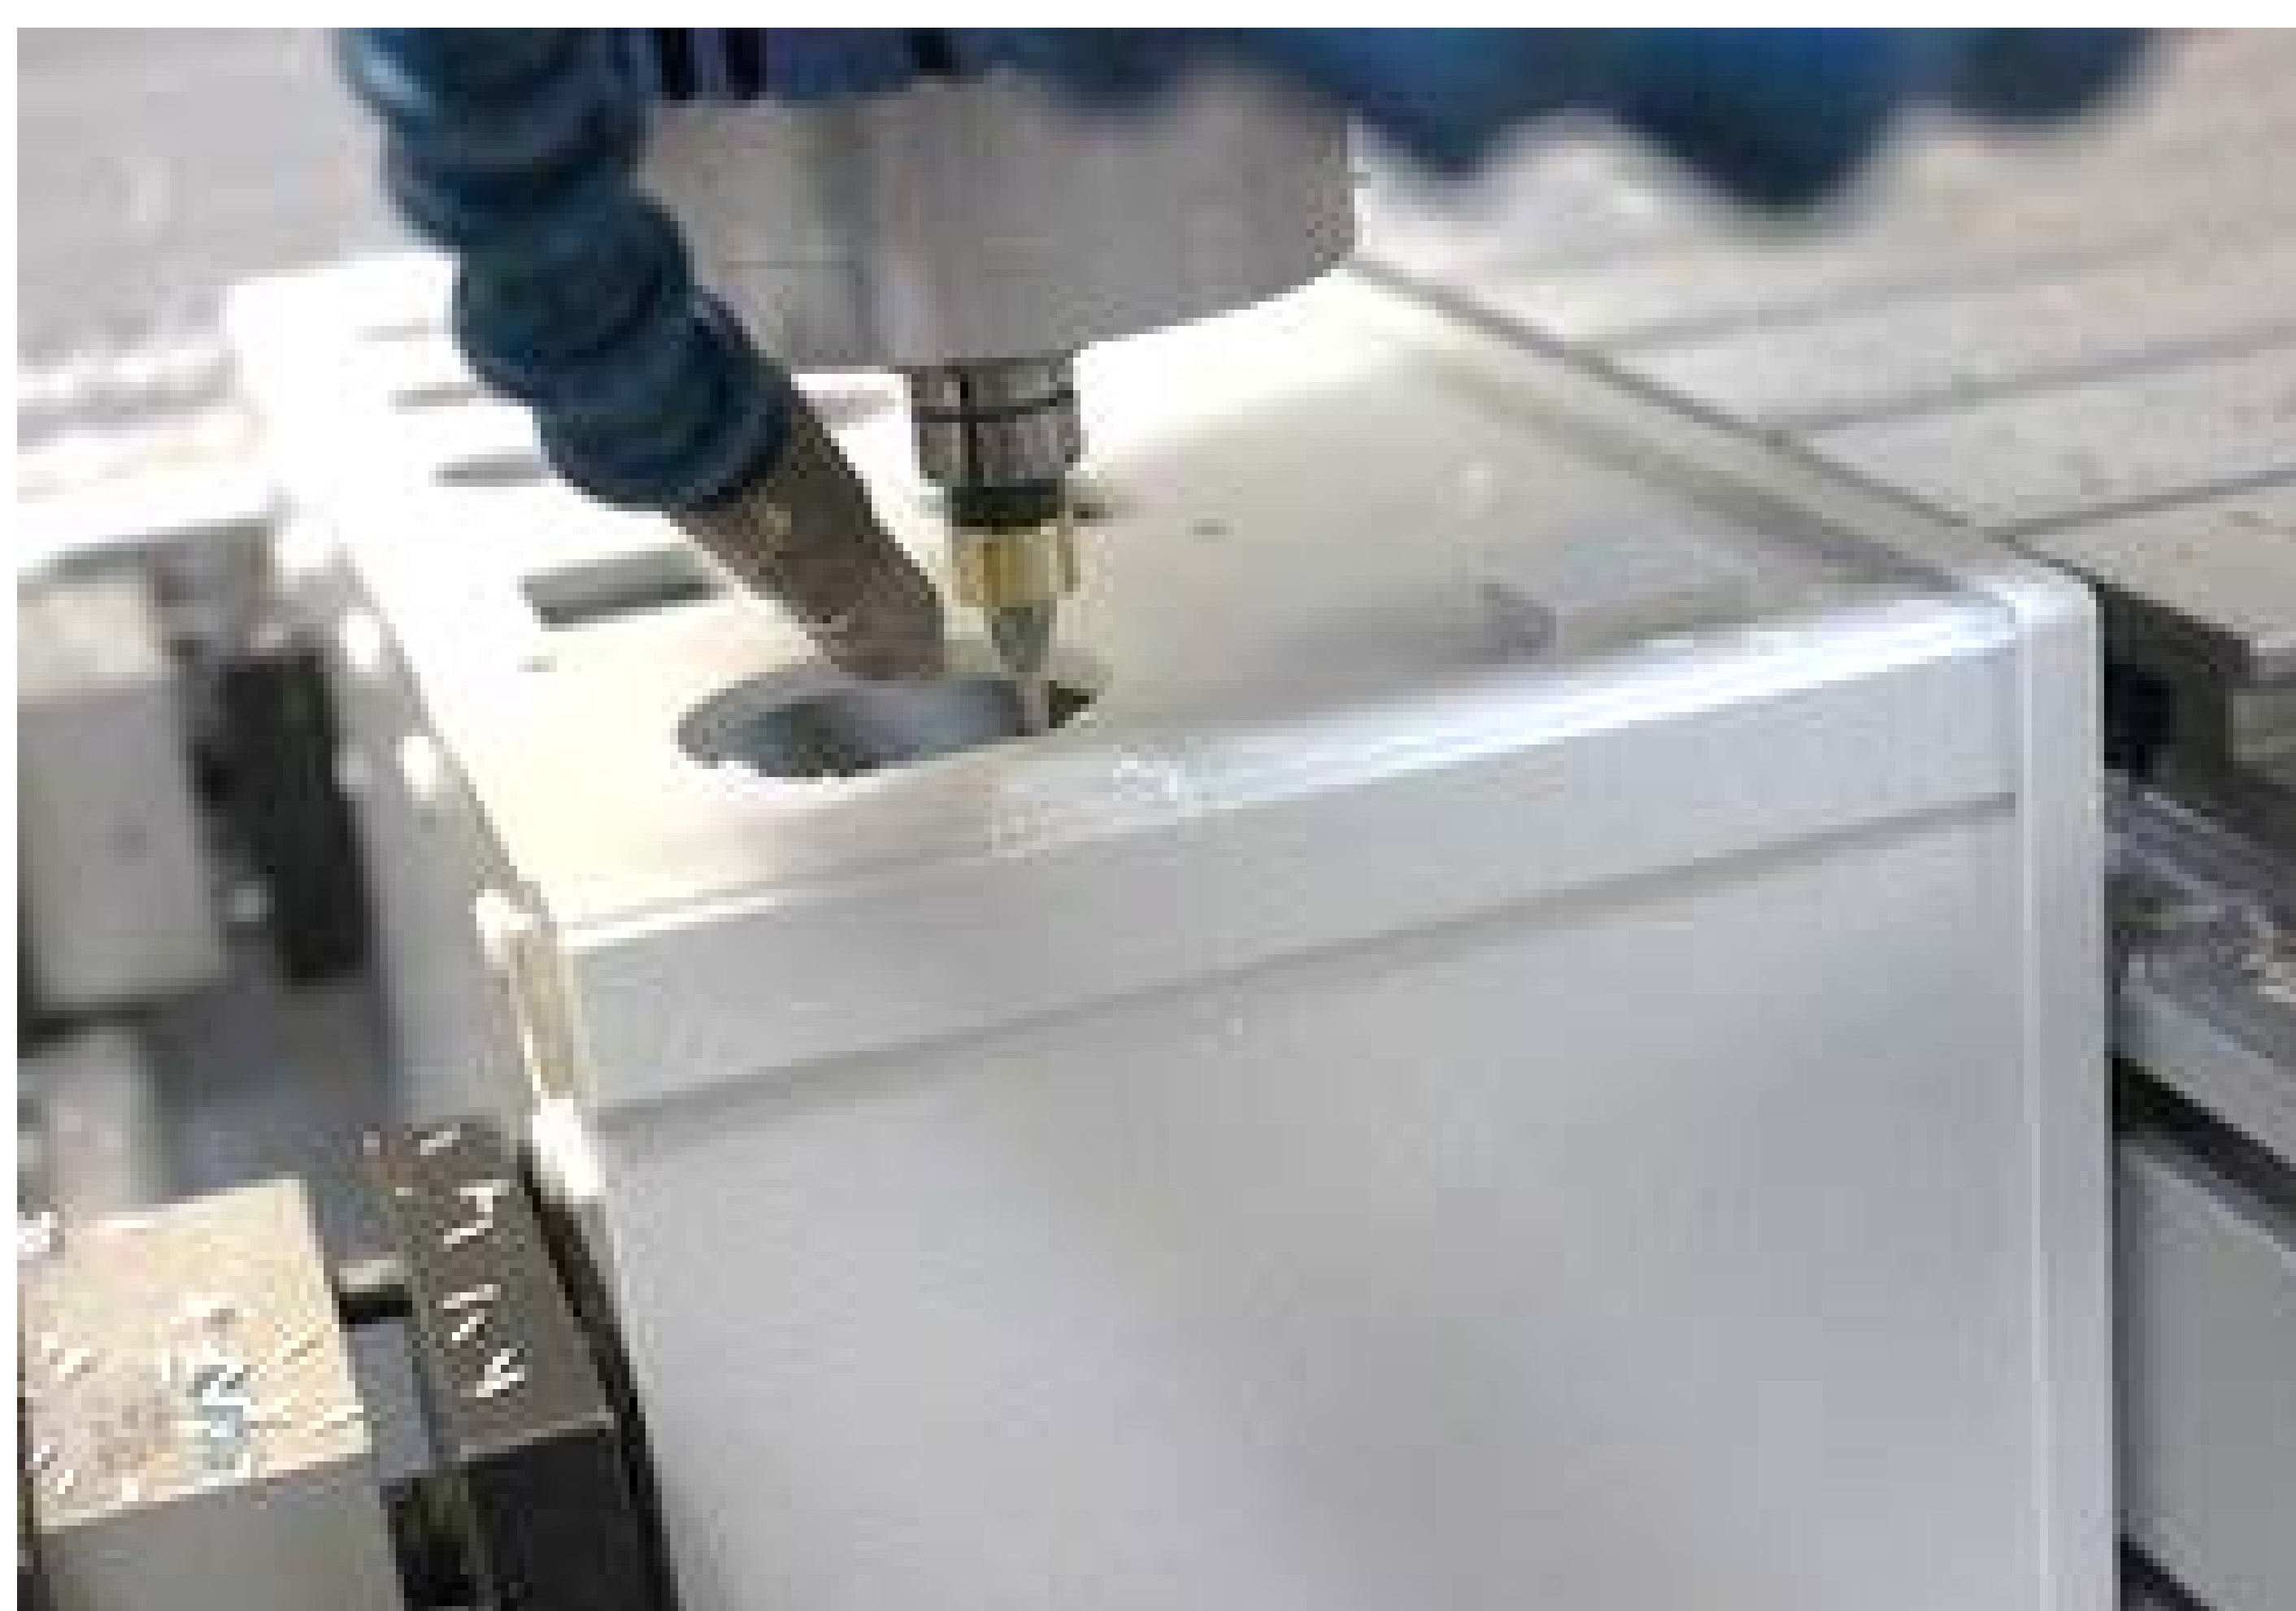

Fibox can also provide assembly services and install accessories delivering a "ready to use" enclosure right out of the box.

Fibox accessories includes a large number of items ranging from hinges and latches, cable glands and wiring accessories, to inspection windows and ventilators.

For the customer requiring modification of a Fibox standard enclosure, CAD drawing files are available for use with all major computer design programs.

Factory technical assistance is available to help the engineer create the most cost-effective method for enclosing your innovations.
